

LMU Munich

Ludwig-Maximilians-Universität München (LMU Munich) wished to enhance staff and student collaboration. By implementing Micro Focus® Vibe®, Novell Vibe Desktop, and ShareOnVibe, it was able to make its administration processes more efficient and enable students and academics to share information easily.

Overview

Ludwig-Maximilians-Universität München (LMU Munich) is one of the largest universities in Europe with more than 48,000 students, 700 professors and 3,600 academic staff. LMU Munich offers a wide range of courses in 150 subjects ranging from humanities to medicine, and including options for interdisciplinary studies.

Challenge

Universities have a mandate for research, teaching, and administration. Staff and students must be able to share information efficiently to collaborate effectively on assignments and research projects.

Dr. Werner Degenhardt, Academic Director and CIO at the Faculty of Psychology and Educational Sciences at LMU Munich, said,

“Micro Focus Vibe is a very flexible tool that opens up a whole range of possibilities for us, particularly in terms of replacing even more of the paper-based administrative processes and our increasing use of mobile devices.”

“We need a more efficient method of collaboration than email can provide. Like most modern academic institutions, LMU Munich is keen to explore new ways of sharing knowledge and supporting learning through the effective deployment of IT systems.”

Solution

The IT team in the Faculty of Psychology and Educational Sciences implemented Micro Focus Vibe, providing a central collaboration platform for users to store, annotate, comment, and tag documents. There are currently 35,000 users running on the system.

“Novell (now part of Micro Focus) Vibe is based on an open source project,” said Dr. Degenhardt. “Since much of the source code is openly available, we can easily build the features we need on top of it. In fact, we have never found a collaborative use case that could not be built with this platform.”

LMU Munich has a workflow that automatically sets up a document-storage workspace—known as a ‘Virtual Seminar’—for every class, enabling students and academics to share information easily. This workflow also connects to other LMU administration systems in the background, and to directory services that store data about the participants.

“The ‘Virtual Seminar’ solution is particularly useful for assignments,” said Dr. Degenhardt. “Students can use the workspace to access all the literature they need, collaborate with

■ Challenge

The university needed an efficient, effective collaboration tool beyond email.

■ Solution

Use Micro Focus Vibe as a central collaboration for users to store, annotate, comment, and tag documents.

■ Results

- + Built a highly flexible and extensible collaboration platform for staff, students and partners
- + Enabled users to work on academic papers on their laptops during their daily commute
- + Enabled researchers to save time finding and storing useful information for later analysis

“ShareOnVibe saves students and researchers considerable time in finding and storing information—and avoids desks cluttered with sticky notes!”

classmates, and submit digital copies of their assignments. Files are stored securely online, rather than on a local hard drive, improving data security.”

Prospective post-graduate students may also use Micro Focus Vibe to apply for courses by uploading the relevant files and completing application forms, helping LMU Munich replace outdated paper-based administrative processes.

Results

The university extended its longstanding Micro Focus Vibe solution by implementing Vibe Desktop and ShareOnVibe to increase staff and student productivity.

Vibe Desktop saves and synchronises files from the user’s desktop to the Vibe site, enabling users to work offline on documents using any PC or Mac.

“With Vibe Desktop, students and staff can work on academic papers on their laptops during their daily commute,” said Dr. Degenhardt. “The next time they connect to the internet, files are automatically synchronised, making it the easiest and most secure way to work on documents. As different versions of files are created automatically, there is no longer any risk of colleagues working on a document simultaneously and having to compare different versions later.”

The university also implemented the Novell Vibe Add-In for Microsoft Office, which enables users to work on text documents, presentations, and spreadsheets directly inside

their Office applications without having to open a browser and connect to the Vibe server.

LMU Munich also leveraged ShareOnVibe, a Firefox add-on developed by Code and Concept, a solution provider and system integrator based in Munich. When students and academics research a topic, they often come across interesting pieces of information online in all types of formats, such as text, videos and PDFs. They wish to save this information quickly so that they may study it more closely at a later date. ShareOnVibe enables students and staff to store information in Micro Focus Vibe in just a few clicks, because metadata such as the web address and the page title is saved automatically.

“ShareOnVibe saves students and researchers considerable time in finding and storing information—and avoids desks cluttered with sticky notes!” said Dr. Degenhardt. “We work with Code and Concept because they provide us with smart solutions—like ShareOnVibe—to real-world issues, rather than just implementing another piece of software.”

With Micro Focus Vibe, LMU Munich has gained a user-friendly collaboration platform for staff and students that enables them to work together more effectively.

“Micro Focus Vibe is a very flexible tool that opens up a whole range of possibilities for us, particularly in terms of replacing even more of the paper-based administrative processes and our increasing use of mobile devices,” said Dr. Degenhardt.
